1. Introduction

1.1 Executive Summary

This document outlines the business requirements for implementing a **Recommended For You- Inventory Liquidation Engine** on the Snitch website.

The feature is designed to strategically promote slow-moving, excess, and aging inventory through prioritized placement, discount visibility, and structured UI exposure.

The system shifts from a traditional user-behavior-based recommendation approach to an **inventory-driven recommendation model**, enabling improved inventory turnover, better product visibility, and increased revenue realization from unsold stock.

1.2 Purpose of the Document

The purpose of this BRD is to define the business needs, objectives, and high-level requirements for the Inventory Liquidation Engine.

This document ensures alignment between business, product, and technology teams and serves as a reference throughout design, development, and implementation phases.

1.3 Project Overview

Snitch currently faces challenges in clearing old and slow-moving inventory due to:

- Limited visibility of discounted products
- Inefficient product discovery
- High inventory holding periods
- Missed revenue opportunities

The proposed solution introduces a **dedicated recommendation section** focused purely on inventory liquidation.

Key Capabilities

- Inventory-driven product recommendation logic
- High-visibility placement on homepage
- Discount-focused product presentation
- Admin-level control over prioritization and tagging
- Dynamic refresh of product listings

Project Details

- **Project Type:** E-commerce Optimization / Revenue Enhancement
- **Start Date:** April 2026
- **Estimated Completion:** June 2026
- **Business Analyst:** TBD

1.4 Scope of the Project

1.4.1 In Scope

- **Recommended For You** section (inventory-driven)
- Homepage placement and visibility optimization
- Navigation restructuring (left side to top)
- Left sidebar introduction with priority tab
- Discount-based product display system
- Admin panel for tagging and prioritization
- Inventory-based product selection logic
- Ranking and sorting mechanism
- Integration with offers (coupons, bundles, flash deals)

1.4.2 Out of Scope

- AI/ML-based personalization
- Behavioral recommendation engine
- External marketing campaign integrations
- Email/SMS targeting systems
- Advanced analytics and predictive modeling

1.5 Business Objectives

- Increase sell-through rate of old inventory by **30–50% within 3 months**
- Improve conversion rate from recommendation section
- Reduce inventory holding period by at least **25%**
- Increase visibility of discounted and clearance products
- Improve customer engagement with deals and offers
- Maximize revenue recovery from excess stock

1.6 Assumptions and Constraints

1.6.1 Assumptions

- Product inventory data is accurate and updated
- Discount data is available and configurable
- Admin team will actively manage product tagging
- Website traffic is sufficient to drive visibility

1.6.2 Constraints

- No personalization logic in Phase 1
- Dependency on inventory and sales data accuracy
- UI changes may impact existing user behavior
- Limited timeline for implementation
- Discount margins may affect profitability

2. Stakeholders

Stakeholder	Role	Responsibility
Management	Sponsor	Approval & business direction
Product Team	Product Owners	Feature definition & prioritization
Marketing Team	Promotions	Discount strategy & campaigns
Inventory Team	Operations	Inventory data & stock management
Tech Team	Development	System implementation
Admin Team	Operations	Product tagging & control
Customers	End Users	Interaction with recommendations

3. Business Requirements

3.1 Functional Requirements

1. Recommendation Section

- System shall display a “Recommended For You” section on homepage
- Section shall prioritize discounted and clearance products
- Section shall be accessible via left sidebar

2. Product Selection Logic

- System shall identify products based on:
- Inventory age
- Stock levels
- Sales velocity
- Admin tagging

3. Product Display

- Product cards shall include:
- Discount percentage
- Tags (Clearance, Hot Deal, Limited Stock)
- Original vs discounted price

4. Ranking Logic

- Products shall be prioritized based on:
- Admin priority
- Inventory age
- Stock quantity
- Discount value

5. Admin Controls

- Admin shall be able to:
- Tag products (Recommended, Clearance, Priority)
- Configure thresholds (inventory age, stock level)
- Control display limits
- Adjust discount rules

6. Dynamic Updates

- System shall update product list:
- Real-time OR
- Scheduled intervals (e.g., every 6 hours)

7. Offer Integration

- System shall support:
- Coupons
- Flash deals
- Bundle pricing

3.2 Non-Functional Requirements

- Page load impact should be less than 10%
- System must support large SKU volumes
- Fully responsive across devices
- Real-time stock accuracy
- High availability and reliability
- No broken product links

4. Process Flow

1. Inventory data is fetched from system
2. System evaluates products based on defined criteria
3. Admin tags (if any) override logic
4. Ranking algorithm prioritizes products
5. Products displayed in Recommended For You section
6. User interacts with products
7. System updates list dynamically based on schedule

5. Risk & Mitigation Strategies

Risk	Mitigation Strategy
Low user engagement	Improve UI placement and visibility
Incorrect product selection	Validate inventory and sales data
Over-discounting impact	Set discount thresholds

Risk	Mitigation Strategy
Poor admin usage	Provide admin training
Performance impact	Optimize loading and caching

6. Success Criteria

- 30–50% increase in old inventory sell-through
- 20% increase in conversion rate from section
- 25% reduction in inventory holding time
- Increase in CTR on recommended products
- Improved revenue from clearance stock

7. Approval & Sign-Off

Stakeholder	Title	Signature	Date
Project Sponsor	Management		
Product Head	E-commerce		
Tech Lead	Technology
